Goals

Goals

- Provide a **non-threatening learning environment** for students from **every background** to gain their first programming experience.

Goals

- Provide a **non-threatening learning environment** for students from **every background** to gain their first programming experience.
- Teach practical programming skills to interested students where each student can further excel and leverage their newly gained programming skills in their field or interests.

Goals

- Provide a **non-threatening learning environment** for students from **every background** to gain their first programming experience.
- Teach practical programming skills to interested students where each student can further excel and leverage their newly gained programming skills in their field or interests.
- Establish a unique environment for Koç students who are interested in teaching where they can experience **every aspect of teaching** including giving lectures to crowded audiences and improve their teaching skills utilizing **peer-support**.

- Provide a **non-threatening learning environment** for students from **every background** to gain their first programming experience.
- Teach practical programming skills to interested students where each student can further excel and leverage their newly gained programming skills in their field or interests.
- Establish a unique environment for Koç students who are interested in teaching where they can experience **every aspect of teaching** including giving lectures to crowded audiences and improve their teaching skills utilizing **peer-support**.
- Create high quality and open source educational content.

Team Members

Ahmet Uysal
Senior Computer Eng.

Gül Sena Altıntaş
Junior Comp. Eng. & Math

Ceren Kocaoğullar
Senior Comp. Eng. & MAVA

Hasan Can Aslan
Junior Comp. Eng. & ECON

Advisors

Prof. Barış Tan

Prof. Murat Sözer

Prof. Öznur Özkasap

Prof. Barış Bozkurt

Dr. Banu Yobaş

Dr. Zuhâl Zeybekoğlu

Certificate Program

Certificate Program

- 12 weeks long
- 75 min. lecture + 75 min. sections each week
- Lectures
- Prioritizes practical aspects of programming
- ?
- Attendance and

Curriculum

Week	Topic
23.09.2019	Program Introduction & Variables, Console I/O, Simple Functions
30.09.2019	Basic Operators & Branching
07.10.2019	Strings, While Loops, Introduction to Lists
14.10.2019	Lists Continued, For Loops
21.10.2019	Functions
28.10.2019	Holiday (Republic Day)
04.11.2019	Mutability, Aliasing and Cloning, Sets, Tuples, Dictionaries
11.11.2019	Error & Exception Handling, File Input and Output
18.11.2019	Using third-party packages
25.11.2019	TBD*
02.12.2019	TBD*
09.12.2019	TBD*

*TBD: Workshops will be offered in selected topics and packages.

Fall 2019 Student Majors

İrem Şot | PhD | Design, Technology & Society

As a person who caught up in Social Sciences for 10 years, I had several reservations before starting the KOLT Python Program. Apart from lacking any sort of knowledge about computer programming, the mere text-based education that I have obtained in the past years led me to question whether I would have been capable of learning the programming or not. Nevertheless, both the design of the program, and our trainers who allocate their spare time to our learning and employ rather simplistic and easy-to-grasp language made me realize that my thoughts regarding Python were just prejudice. Furthermore, the program is very lucrative in adopting participant oriented approach; lectures and sections are highly interactive, all material and exercise solutions are promptly made available online. This participant-centered approach surely facilitates asking the questions that most of us label as “embarrassing”.

Mısra Taşçı | Freshman | School of Medicine

I'm a medical student and this is my first year. I am very interested in programming and this program is really great for me because it is like a serious course but it is fun and without the stress of exams. Also our instructors are very nice and helpful, and I really love the assignments that they prepare, time really passes quickly when I try doing them. I would love it if there were more programs like this about other subjects that I'm interested in.

Petrus J. Gerrits | PhD | Archeology

The KOLT Python certificate program has been very useful for me so far. I studied Archaeology for my undergraduate and graduate studies and my hope is that with the content of this course I can make use of Python programming more regularly. The instructors are great, they make learning Python understandable, respond quickly to questions and assist whenever needed.
